

Growing Schedule: Special Mix

- Start building a nutrient buffer from week 3, gradually increasing the base nutrients **Gold Label Soil A & B**.
- Add **Gold Label Roots** up to the 3rd week of flowering while the plant is still developing growth.
- Flush with only water in the last week to complete the cycle as the medium still has a nutrient buffer.
- Do not overdose your nutrient solution with **Ultra PK** and **Ultra MG**. They are highly concentrated and this will create an imbalance in your NPK levels.
- Add **Enzymes** once a week starting week 3 of flowering or at least once in week 3 of flowering and once before flushing. Add 0.5ml/litre once or 0.1ml/litre continuously.

This is a basic growing schedule. Always adapt your schedule to your crop. Different crops have different nutrient requirements.

All nutrient dosages are ml/litre
